

ML 1-ZR/160/BBMU/...

160 MHz 2 dB Mobile Antenna for Glass Fibre Roof

DESCRIPTION

- Sturdy $\frac{1}{2} \lambda$ mobile antenna in professional industry standard quality.
- Groundplane independent antenna for mounting on non-conducting surfaces.
- Ideal for glass fibre roofs as can be found on some trucks, lorries, transport vans, busses and farm machinery.
- The ML 1-ZR/160/BBMU/... can be tuned from 144 - 175 MHz via the adapter box.
- Necessary cable length between the adapter box and the mount: 100 mm (FME junction cable included).
- Simple mounting exclusively with access from the outside. Models with roof thickness from 2 mm to 7.5 mm mounting from the inside.
- FME antenna cable can be mounted direct in the adapter box.

Tip: The cable length should not be changed!

Hat screw option:

For antenna delivered with hat screw instead of wing screw add a K to the antenna designation.

INSTALLATION

1. Mount and adapter box to be connected by means of the 100 mm junction cable included in the supply.
2. Connect the FME cable for the radio station to the adapter box.
3. The Z-mount is particularly well suited for mounting on car-roofs because of its ability to be installed exclusively with access from the outside. The Z-mount for roof thickness from 2 mm to 7.5 mm must be mounted from the inside. However, the antenna can be installed anywhere on the car, as the Z-mount is equally well suited for mounting on e.g. trunk or wing.
4. Adjust the frequency by means of an SWR-analyzer via C1 and C2 on the adapter box.

2. INSTALLATION STEPS

Do not use sealer on rubber gasket or other places.

3. TUNING

SWR 4000 Analyser with built-in signal generator and graphic display range of measurement 30-2700 MHz

Tune the SWR in on the desired centre frequency and suitable spacing (for instance 30 MHz). Adjust C1 till the SWR curve emerges on the display. Adjust C2 till the best possible SWR minimum is reached on the required frequency.

Fine-tune the SWR minimum and the bandwidth step by step by means of C1 and C2.
