Step 2. <u>Unleassing seat</u>

Unscrew two original bolts M8 and two original M8 nuts located at the front and rear of seat rails. Keep two original nuts M8 that you remove, you will need to use them in later step. Unplug connection wires located between seat base and seat. Then you can lift seat with rails up and put it beside.

#### Step 3. Emergency brake adapter mounting

First take off the plastic chasis of emergency brake. You will need to unscrew 2 original M8 nuts which is holding emergency brake in deafult location. Keep two original nuts M8 that you remove, you will need to use them in later step.

Next screw the adapter onto the handbrake body using screws from the supplied kit.

At the end screw adapter with handbrake in deaflut location using original threaded bars and original M8 nuts.
